

## Game Theory

---

---

---

---

---

---

---

---

## Prisoner's Dilemma

		Column	
		Confess	Don't
Row	Confess	(-10,-10)	(0,-20)
	Don't	(-20,0)	(-1,-1)

---

---

---

---

---

---

---

---

## Dominant Strategy

- Dominant strategy is best for a player no matter what others do

		Column	
		Confess	Don't
Row	Confess	(-10,-10)	(0,-20)
	Don't	(-20,0)	(-1,-1)

---

---

---

---

---

---

---

---

## Dominance Solvability

- Iterated elimination of dominated strategies

		Piuny	
		Enter	Don't
MS			
	Enter	(2,-2)	(5,0)
	Don't	(0,5)	(0,0)

---

---

---

---

---

---

---

---

## Dominance Solvability

- Iterated elimination of dominated strategies

		Piuny	
		Enter	Don't
MS			
	Enter	(2,-2)	(5,0)
	Don't	(0,5)	(0,0)

---

---

---

---

---

---

---

---

## Dominance Solvability

- Iterated elimination of dominated strategies

		Piuny	
		Enter	Don't
MS			
	Enter	(2,-2)	(5,0)
	Don't	(0,5)	(0,0)

---

---

---

---

---

---

---

---

## Nash Equilibrium

- Outcome is a Nash equilibrium if it is the result of strategies such that each player's strategy maximizes that player's profits given the strategies of others

---

---

---

---

---

---

---

---

## Battle of the Sexes

		Woman	
		Baseball	Ballet
Man	Baseball	(3,2)	(1,1)
	Ballet	(0,0)	(2,3)

---

---

---

---

---

---

---

---

## Matching Pennies

		Column	
		Heads	Tails
Row	Heads	(1,-1)	(-1,1)
	Tails	(-1,1)	(1,-1)

---

---

---

---

---

---

---

---

## Mixed Strategies

- Column plays H with probability  $p$

		Column		Row E payoff
		Heads	Tails	
Row	Heads	(1,-1)	(-1,1)	$1p + -1(1-p) = 2p-1$
	Tails	(-1,1)	(1,-1)	$-1p + 1(1-p) = 1-2p$

---

---

---

---

---

---

---

---

## Mixed Strategy Nash Equilibrium

- Strategy for a player is probabilities over the actions
- Those probabilities maximize expected profits
  - So profits from each action chosen with positive probability is the same
  - Indifferent to specific probability values!
- Not mixed = “pure strategy”

---

---

---

---

---

---

---

---

## Battle of the Sexes

		Woman		Man's Expected Payoff
		Baseball (prob $p$ )	Ballet (prob $1-p$ )	
Man	Baseball (prob $q$ )	(3,2)	(1,1)	$3p + 1(1-p) = 1+2p$
	Ballet (prob $1-q$ )	(0,0)	(2,3)	$0p + 2(1-p) = 2-2p$
Woman's E Payoff		$2q + 0(1-q) = 2q$	$1q + 3(1-q) = 3-2q$	

---

---

---

---

---

---

---

---

### Chicken

		Column	
		Swerve	Don't
Row	Swerve	(0,0)	(-1,1)
	Don't	(1,-1)	(-4,-4)

---

---

---

---

---

---

---

---

### Cooperation

		Column	
		Clean	Don't
Row	Clean	(10,10)	(0,15)
	Don't	(15,0)	(2,2)

---

---

---

---

---

---

---

---

### Driving on the Right

		Column	
		Left	Right
Row	Left	(1,1)	(0,0)
	Right	(0,0)	(1,1)

---

---

---

---

---

---

---

---

### Location Game

		NYC	
LA		No Concession	Tax Rebate
	No Concession	(30,10)	(10,20)
	Tax Rebate	(20,10)	(20,0)

---

---

---

---

---

---

---

---

### Mudslinging

		Republican	
Dem		Clean	Mud
	Clean	(3,1)	(1,2)
	Mud	(2,1)	(2,0)

---

---

---

---

---

---

---

---

### Avoidance

		Rocky	
You		Party 1	Party 2
	Party 1	(5,15)	(20,10)
	Party 2	(15,5)	(0,20)

---

---

---

---

---

---

---

---

### Extensive Form Games

---

---

---

---

---

---

---

---

### Removing LA's Dominated Strategies

---

---

---

---

---

---

---

---

### Iterated Elimination of Dominated Strategies

---

---

---

---

---

---

---

---

## Supergames

- Repeat a given game over and over
- Price cutting game
- Dominant strategy: Low

		Firm 2	
		High	Low
Firm 1	High	(15,15)	(0,25)
	Low	(25,0)	(5,5)

---

---

---

---

---

---

---

---

## Grim Trigger Strategy

- Cooperate (high price) until rival prices low – then price low forever
- If one uses grim trigger, should the other?
- Payoff if defect in time  $t$

$$\begin{aligned}
 V_t &= 15(\delta + \delta^2 + \dots + \delta^{t-1}) + 25\delta^t + 5(\delta^{t+1} + \delta^{t+2} + \dots) \\
 &= \frac{15\delta}{1-\delta} - \frac{\delta^t}{1-\delta}(15 - 25(1-\delta) - 5) \\
 &= \frac{15\delta}{1-\delta} - \frac{\delta^t}{1-\delta}(-15 + 25\delta)
 \end{aligned}$$

---

---

---

---

---

---

---

---

## Cooperation

- If  $\delta > \frac{3}{5}$
- then optimal  $t = \infty$ , and the best response to the grim trigger strategy is the grim trigger strategy
- Cooperation is an equilibrium in the supergame supported by the grim trigger strategy

---

---

---

---

---

---

---

---

## Folk Theorem

- An outcome is individually rational for a player if it is as good as the payoff in the worst Nash equilibrium
- Folk theorem: if  $\delta$  is high enough, any outcome that is individually rational for all players is an equilibrium to the supergame

---

---

---

---

---

---

---

---
